Less admin.
More human.

Four copy-and-paste AI prompts that clear the busywork, so you can show up for the conversations that actually matter.

4 prompts + a bonus | **About 5 min each** | **Zero setup** | **Works in any AI chat**

01

JOB SEEKERS

Prep a recruiter call

02

FOUNDERS

Get clear on a hire

03

SOURCERS

Find a new place to look

04

ANYONE

Nail the follow-up

Built for brains with 14 tabs open.

Skim it. Grab a prompt. Close the tab.

START HERE

Pick one. Skip the rest.

No need to read in order. Find the line that sounds like your week and jump to that page.

01

PAGE 3

“I have a recruiter call coming up.”

→ Walk in with better questions

02

PAGE 4

“Our job brief turned into a wish list.”

→ Get clear on the hire

03

PAGE 5

“My search keeps showing the same people.”

→ Find a new place to look

04

PAGE 6

“I just got off a call and owe a follow-up.”

→ Send it while it is fresh

EVERY PROMPT WORKS THE SAME WAY

1. **Copy** the box into ChatGPT, Claude or any AI chat.
2. **Swap** every yellow part for your own details.
3. **Read** the answer before you use any of it.

No accounts to connect. For work, use an AI tool your company approves and only share what you are allowed to share. Every example in this guide is made up, and AI still gets details wrong.

FOR JOB SEEKERS

01 Walk in with better questions.

USE IT WHEN
A recruiter call is coming up and you have way too many tabs open.

TIME
About 5 min

HAVE READY
The job post + 5 facts about your work

COPY THIS — SWAP THE YELLOW PARTS

```
Help me prep for a recruiter call. Use only what I paste below.

Give me:
1. Five specific questions about the role, the team and how the work actually
runs.
2. Three moments from my background worth bringing up, and why each one fits.
3. Anything important the job post leaves unclear.

Do not invent experience or script my answers. Keep it to one page.

JOB POST: [paste it here]
MY BACKGROUND: [5 factual bullet points]
```

MADE-UP EXAMPLE

You paste

A Senior Software Engineer, GenAI role that mentions LLM evals and a hybrid schedule. Your background includes Python APIs and an internal RAG prototype.

A strong question back

“How many days a week would I be in the office, and is that set or flexible?”

THEN DO THIS

- [ ] Circle the 2 or 3 questions you actually care about
- [ ] Pick one real story for each example
- [ ] Say it your way on the call. No script.

FOR FOUNDERS + HIRING MANAGERS

02 Before you hire, get clear on the work.

USE IT WHEN
The brief now lists everything the team might ever need.

TIME
About 5 min

HAVE READY
Your rough hiring notes, messy is fine

COPY THIS — SWAP THE YELLOW PARTS

```
Turn these rough hiring notes into a short brief for a sourcer.

Sort it into:
1. What this person must deliver in their first 6 months.
2. Skills that are essential to those outcomes, with a reason for each.
3. Skills they could learn on the job.
4. Three decisions we need to make before the search starts.

Treat your suggestions as proposals, not agreed requirements. Flag anything that
contradicts itself. Do not add requirements just because similar job ads list
them.

HIRING NOTES: [paste them here]
```

MADE-UP EXAMPLE

You paste

“We need a Product Manager for our GenAI assistant. Technical enough to write prompts and read eval results. Pricing experience would be nice. Not sure yet if they report to product or engineering.”

A decision it should surface

“Does this PM report to product or engineering? That changes who you are looking for.”

THEN DO THIS

- [ ] Settle the 3 open decisions with your team
- [ ] Cut anything nobody can defend
- [ ] Send the shorter brief. Clearer search, clearer pitch.

03 Find a new place to look.

FOR SOURCERS + HIRING TEAMS

USE IT WHEN
Every search returns the same profiles. Same work often hides under a different title.

TIME
About 5 min

HAVE READY
Outcomes, must-haves, titles you already search

COPY THIS — SWAP THE YELLOW PARTS

```
Suggest three adjacent job titles or backgrounds worth researching for this role.

For each one, give me:
1. The work that could overlap with what we need.
2. The evidence I should look for to confirm it.
3. One question to test that overlap in a conversation.

These are search ideas, not judgments about anyone's ability. Keep every non-
negotiable. Do not name people or assume a title proves a skill. Under 250 words.

OUTCOMES WE NEED: [paste]
NON-NEGOTIABLES: [paste]
TITLES WE ALREADY SEARCH: [paste]
```

MADE-UP EXAMPLE

You paste

“Ship LLM features to production: retrieval and evals. Must have shipped an LLM feature real users rely on. We search: Machine Learning Engineer.”

One idea it might give you

Search or backend engineers who built retrieval systems. Check they shipped to production. A weekend RAG demo does not prove it.

THEN DO THIS

- [ ] Try one new title this week
- [ ] Look for the evidence, not the title
- [ ] Ask the test question on the first call

FOR ANYONE AFTER A CONVERSATION

04 Stop rewriting the follow-up.

USE IT WHEN
You just finished a kickoff, networking call or project chat.

TIME
About 3 min

HAVE READY
A few rough bullets. That is enough.

COPY THIS — SWAP THE YELLOW PARTS

```
Turn these rough notes into a short follow-up I can review and send.

Use three sections: Agreed, Still open, Next steps.
For each next step, include an owner and a deadline only if my notes say so.
Otherwise write "to confirm".

Keep maybes separate from commitments. Do not add promises, decisions or dates.
Plain, warm language. Under 150 words.

NOTES: [paste your bullets]
```

MADE-UP EXAMPLE

You paste

“Sam sends the AI Engineer brief Friday. Comp still undecided. Maybe ask Lee to join the next call.”

A good draft keeps it straight

Agreed: Sam, brief, Friday

Open: compensation

Maybe: Lee joins. Not “Lee is coming.”

THEN DO THIS

- [ ] Check every name, date and promise
- [ ] Change one line so it sounds like you
- [ ] Hit send yourself, today

BONUS · USE IT ON ANY ANSWER ABOVE

Make it sound like you.

AI writing has tells, and people notice. Two quick moves fix most of it.

1 Strip the AI tells

Long dashes (—) **“I’d love to”** **“I hope this finds you well”** **“Delve,” “leverage,” “elevate”**

Lists of three, everywhere **Every sentence the same length**

COPY THIS — SWAP THE YELLOW PARTS

```
Edit this so it does not read like AI wrote it. Remove long dashes, filler openers,
buzzwords and anything that sounds like a template. Mix short and long sentences.
Keep every fact and do not add new ones.

TEXT: [paste the draft]
```

2 Teach it your voice

Give it a few things you actually wrote: emails, posts, texts. It picks up your words, your rhythm and your personality, then adapts.

COPY THIS — SWAP THE YELLOW PARTS

```
Below are a few things I wrote myself. Study how I write: word choice, sentence
length, how formal I am, how I open and sign off.

Then rewrite my draft so it sounds like me. Match my personality, not just my
grammar. Do not copy lines from my samples.

HOW I'D DESCRIBE MY STYLE: [3 words, like direct, warm, a bit funny]
MY SAMPLES: [paste or upload 2 or 3 emails or posts]
DRAFT: [paste it]
```

PRO MOVE

Keep your samples in one note so you can reuse them. Many AI tools also let you save your style once so it applies every time.

LAST CHECK

- [ ] Read it out loud
- [ ] Fix any line you would never say

Stuck? Quick fixes.

Too generic

Add one real constraint. “The team has no dedicated infrastructure engineer” beats “we are a fast-moving startup.”

Too long

Reply with:

```
Keep only the three things that change what I do next.
```

Sounds like a robot

Reply with:

```
Rewrite this the way I would say it out loud. Shorter sentences.
```

Want it to sound exactly like you? Use the bonus voice prompt.

BEFORE YOU USE ANYTHING IT WRITES

- [ ] **Facts** are right
- [ ] **Nothing** was assumed
- [ ] **It sounds** like you

Try one prompt on one task this week.

Then spend the time you get back on what AI cannot do for you: a real conversation, a thoughtful reply, or an actual break.

Say hi: `linkedin.com/in/genna-greco/`
